

MANAGED DETECTION & RESPONSE (MDR)

# HUNT DOWN CYBER THREATS WITH NEW ZEALAND'S BEST SECURITY TEAM & TECHNOLOGY

*Cyber threats are constantly evolving and becoming more sophisticated, posing a serious risk to your business.*

Our MDR service combines the best of both worlds: a cutting-edge Security Incident & Event Management (SIEM) technology that collects and analyses all the data generated by our security systems, and a highly-skilled security team that provides the expertise and guidance to hunt down and eliminate cyber threats.

Our service is designed to provide you with 24x7 comprehensive coverage, collate threat intelligence feeds to provide visibility across your entire IT estate, prioritise and recommend actions precise to your organisation and situation, and elevate the focus onto business risk mitigation and not just technical box-ticking.

## HOW OUR SOC & SIEM WORKS

### 24x7 SOC & SIEM

Our Security Operations Centre (SOC) and Security Incident & Event Management (SIEM) service combine to create a formidable defence strategy, ensuring rapid detection and response to cyber-attacks.

### Central Threat Intelligence

We deploy and configure the SIEM technology on your premises or in the cloud, and connect it to security systems, such as firewalls, antivirus, intrusion detection, and more. We collect and store all the data generated by these systems in a centralised and secure repository, and enrich it with threat intelligence feeds from various sources.

### Smart Threat Detection

We use advanced analytics, machine learning, and threat intelligence to analyse the data and identify any anomalies, patterns, or indicators of compromise. We correlate and contextualise the data to understand the nature, source, and impact of any potential or actual cyber threats.

### Fast Threat Response

We alert and inform you of any security events that require your attention or intervention. We provide you with a prioritised and actionable plan on how to respond and resolve the issue. We also provide you with guidance and support throughout and follow up with you to ensure the issue is fully resolved.

### Continuous Improvement

We conduct regular reviews and audits of your security data and systems, and provide you with feedback and recommendations on how to improve your security posture and performance. We also conduct monthly vulnerability scans and produce monthly reports to keep you updated on your security status.

MANAGED DETECTION & RESPONSE (MDR)

# WHY CHOOSE THE INSTILLERY'S MANAGED DETECTION & RESPONSE?

We believe New Zealand businesses deserve the best of the best, in capability and in service. We've partnered with global leaders to craft a powerful suite of networking technology wrapped around a service that instills confidence, action and capability across your business.

## Comprehensive Visibility

You'll gain a clear and comprehensive view of your security posture, from the overall state of your IT environment to the detailed events and activities within your systems. We can see what's happening, what's not happening, and what needs to happen to keep your business secure.

## Expert Guidance

Our experienced and certified security consultants will help you navigate the complex and dynamic cybersecurity landscape. They will provide you with advice and recommendations on how to mitigate and remediate any identified risks and threats, and how to enhance your security standards and practices.

## Proactive Action

Whether you need to prevent or contain a breach, our security team will provide you with the best course of action and support you throughout the process. This will include prioritised and actionable plans for both proactive and reactive security activities as well as conducting regular vulnerability scans and producing monthly reports to keep you informed and updated on your security status.

## A Personal Concierge

We are more than just a security service provider. We are your security partner who can be your assistant and trusted advisor in the ever-changing and complex security landscape. We offer you the 'Black Card' concierge service, which is the ultimate cyber security and privacy experience that gives you the edge in the digital world.

# OPTIONAL ENHANCEMENT SERVICES

*Our service gives you round-the-clock threat monitoring and response. Plus, you can add our Secure Endpoint Service and Network Intrusion Detection Services to extend that protection and shield your devices and network from sophisticated attacks.*

## SECURE ENDPOINT SERVICE

Endpoints are the most common entry point for cyber attackers, who use various techniques and tactics to compromise your systems, applications, and data. You need a proactive and comprehensive approach to protect your endpoints from malware, ransomware, and other advanced threats.

That's why we offer the Secure Endpoint Service, a cloud-native, AI-enhanced security platform that integrates with our 24x7 Security Operations Centre (SOC) solution to provide endpoint protection, threat detection, and incident response.

## NETWORK INTRUSION DETECTION

Your network is the backbone of your IT environment, connecting your users, systems, applications, and devices. However, it is also a prime target for cyber attackers, who use various techniques and tactics to infiltrate your network and compromise your data and resources. You need a proactive and comprehensive approach to detect and prevent network intrusions and attacks.

Our Network Intrusion Detection Service is a security solution that integrates with our 24x7 Security Operations Centre (SOC) to monitor your network traffic and alert you of any suspicious or malicious activity.
