

VULNERABILITY MANAGEMENT

DECREASE YOUR ATTACK SURFACE BY PROACTIVELY MANAGING VULNERABILITIES

Cyber attacks are becoming more frequent and sophisticated, exploiting vulnerabilities in your IT environment. These vulnerabilities can expose your data, disrupt your operations, and damage your reputation.

You need a proactive and comprehensive approach to identifying and managing vulnerabilities before they become a headache.

Our Vulnerability Management Service is a cloud-based security solution that integrates with our 24x7 Security Operations Centre (SOC) service to assess and prioritise the vulnerabilities that matter most and work with your team to remediate them.

HOW OUR VULNERABILITY MANAGEMENT WORKS

Continuous Scanning

We scan your IT environment for vulnerabilities on a regular basis, using both active and passive methods. We cover all your assets, including servers, workstations, devices, applications, and networks.

Patching Management

We apply patches and updates to your systems and applications as soon as they are available, using automated and manual processes. We also ensure that your systems and applications are configured securely, following the best practices and standards.

Vulnerability Assessments

We conduct periodic vulnerability assessments and penetration tests to validate your security controls and identify any weaknesses or gaps. We use both automated and manual techniques, simulating real-world attack scenarios and techniques.

Risk-based Remediation

We prioritise the vulnerabilities based on their severity, impact, and exploitability, and provide you with clear and actionable remediation guidance. We also help you implement the remediation steps, either remotely or on-site, depending on your preference and needs.

WHY CHOOSE THE INSTILLERY'S VULNERABILITY MANAGEMENT?

With our service, you can reduce your attack surface, improve your security posture, and comply with industry standards and regulations.

Enhanced Security

We help you protect your IT environment from cyber threats, by reducing your attack surface and improving your security posture. We help you prevent data breaches, service disruptions, and reputational damage.

Improved Visibility

With our service, you can get comprehensive and customised reports, dashboards, and alerts, showing your vulnerability status, trends, and performance. You can also get access to threat intelligence and analytics, to enhance your security awareness and decision-making.

Cost Savings

We help you save money and resources, by reducing the likelihood and impact of cyber incidents, as well as the costs and consequences of recovery, such as fines, lawsuits, and loss of business.

Peace of Mind

We help you achieve peace of mind, by providing you with a reliable and trusted security partner. We help you monitor and manage your vulnerabilities, and support you in case of any issues or incidents.
